

What's New in LEADS 2.0.7

FEATURES

Property Inquiry

Property can now be viewed with an inquiry screen. Property can be accessed by Category/Article, Serial Number, Owner Applied Number, Owner, or by Tag number.

Property Search Report

Property can be searched and printed with this report.

UCR Supplementary Homicide Report

The SHR will now be printed when homicides are tallied on the UCR.

A Homicide tab has been added to the Incident Offense screen so that additional information can be entered for homicide offenses.

Deceased Individuals

Deceased individuals are now colored red on all Individual Browse screens. Also, the decease date is displayed in the address column. Age is now calculated correctly for deceased persons.

Incident Report

Owner name now prints in Property section.

Incident Search Report

Can now select unapproved reports only.

What's New in LEADS 2.0.7

CORRECTIONS

Article Codes

Article Codes could be created without a UCR type. This caused errors on the B1 and B2 pages of the UCR Report. The Update Article screen now requires that the UCR Type be selected from a list of valid choices.

Individual Search

Search by Height, Weight didn't work.

Dispatch

Changing Location information from the Update Event screen would sometimes cause the location to be indexed under a different address.

All Screens & Reports

Date fields and time fields are no longer displayed in the **Windows Short** format that is set in the Regional section of Windows Control Panel.

Dates are displayed as mm/dd/yyyy or as mm/dd/yy where space is limited.

Times are displayed as hh:mm or hh:mm:ss.

What's New in LEADS 2.0.6

FEATURES

All Windows

Pressing Ctrl+W will restore window to original size and position.

Browse Lists

Pressing Ctrl+R with the focus on any browse list will restore the original column widths.

Phone Number Search

Browse Individuals by Phone allows you to lookup Individuals by phone number.

Privacy Support

The DOB, OLN and SSNO fields may now be hidden on the Incident and Arrest reports. This is specified on the Agency screen.

Confidential Victim Support

In the role code screen, a new print format (4) will print the role description and Number in place of the name on the Incident and Arrest reports.

Examples: "Confidential Victim-1" or "VICTIM-2"

To implement, add a new role code "CV", "Confidential Victim", type "Victim" with print format 4 and priority 1.

Incident/Citation Entry

Individual may be specified with role code and number such as ".S1"

Vehicle may be specified with vehicle number in license field such as ".1".

Individual Entry

Added accelerator keys for Physical Description and Notes tabs.

Individual Inquiry

Added wildcard search by name.

Added wildcard search by address.

Dispatch

Spell check added to narrative.

Incident Report

Owner name now prints in Property section.

Duplicate information is now suppressed on AKA lines.

Narrative point size can be specified on the Agency screen.

Arrest Report

Citation number now prints for each arrest offense

What's New in LEADS 2.0.6

User Defined Activity Reports

Similar to Monthly Activity Reports in LEADS 1.5.

Existing LEADS 1.5 report formats can be converted to LEADS 2.0.6.

What's New in LEADS 2.0.6

CORRECTIONS

Incident Report

Domestic Violence Checkbox always printed checked.
Hate Crime checkbox always printed checked.
Victim names did not always print in the Offense section.
Only the first line of property description printed.

New Graphics Library

The old graphics library was not compatible with Windows Vista and many newer printer drivers.
The symptom of this was LEADS hanging when an incident or individual inquiry screen was opened.
The new library is also faster and more reliable.

Individual Inquiry

Browse by OLN didn't work correctly.
Browse by address didn't work correctly.

Individual Search

Search by Height, Weight didn't work.

Combine Individuals

Could not combine two individuals with exact same name.

Dispatch

Changing Location information from the Update Event screen would sometimes cause the location to be indexed under a different address.

=Location value should not be parsed for correct syntax.

Individual RP1 should be updated when RP is changed on Event screen.

Individual Duplicate key message when role code is changed.

Duplicate Key in IndDes message when saving Event Individual.
